Internet law refers to how legal principles and legislation govern the use of the internet in all its forms. Another term for internet law is cyberlaw. Unlike other areas of the law, internet law cannot be identified as one solid, stable, and specific field of practice. Rather, it incorporates and applies principles from several traditional fields, such as privacy law or contract law, that predate the internet. If you are facing an issue related to cyberlaw or any of the issues listed above, post your job on the UpCounsel marketplace. UpCounsel has lawyers who are well-versed in the complexities of internet law. They understand how cyberlaw factors into multiple fields of law, such as technology, communications, security, and trademark/copyright, and can help resolve internet-related legal issues.
